

VSATs, ICT solutions

CORPORATE
COMPANY PROFILE

Introduction

Comtec is an information technology company incorporated in South Sudan as a private company by the Government of Southern Sudan on 6th November 2017 and established to offer computer systems, Information technology solutions, technical support, a total IT business and consumer user solution in and around South Sudan. **Comtec** was established with one clear objective in mind, to be part our client as they grow and expand. Our clients have found satisfaction and have continued to invest in their IT sections due to the unparalleled services at the very best obtain price that Comtec offers.

Our professional resource pool is a source of pride for our company- a synergy of technical functional and

management professionals. These collectively have made Comtec a success, placing it in a position to understand and envisage both the current and future needs of our clients, with the added value of exemplary customer service. Our success is built on industry-leading designs, excellence coupled with uncompromising attention to quality and detail.

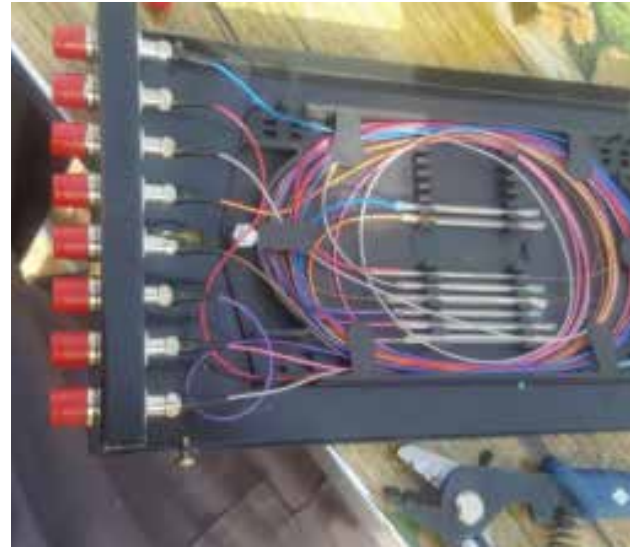

In today's competitive markets, managing profitable growth means leveraging volumes of data about your customers, suppliers, and competitors and then using this information to drive sales and control costs. The responsiveness of your IT environment determines the success of your business. Comtec services provide you the insight to see IT as a strategic tool and the foresight to use it to advance your business strategy.

- IVR Tracking Services
- Website Design, E-mail Hosting & Email Archiving
- Dedicated Servers
- Software Integrations & Custom Web Development
- Security & CCTV Systems
- IPTV Camp Services
- ACS system
- Network Infra Structure

Fiber Optic Solutions

Fiber-optic internet is a complex technology that allows the transmission of information in the form of light rather than electricity. There are many pieces that make up this advanced technology, but two key components are optical fibers and the so-called "last mile" of the fiber-optic network. Comtec Fiber is fast and most reliable services across South Sudan with less downtimes reported. So far we have been able to migrate 99% of our Juba based clients from VSAT to Fiber Optic since the 2020 when fiber was rolled up in South Sudan.

WHY CHOOSE COMTEC

Keys to Success

RESULTS

We deliver results by allying with leading telecom vendors and ISP, employing trained, licensed, and multi-skilled experts.

EXPERIENCE

Our seasoned team of technicians and engineers will help you drastically improve your IT capabilities.

SAVE TIME

With one primary vendor, we manage your IT scope through an exhaustive tracking system.

SUPPORT

We're an extension of your team and we support you 24/7/365 through a dedicated expert.

STABILITY

We're a privately-owned, profitable company incorporated in 2004 demonstrating consistent yearly growth.

SAVE MONEY

We leverage our buying power, new technologies, vendors and knowledge to save your money.

Starlink Internet Solutions

Starlink is a satellite internet network that provides high-speed internet to underserved areas. It was developed by SpaceX, a private spaceflight company founded by Elon Musk.

FAST AND RELIABLE INTERNET FOR HOME, OFFICE AND REMOTE AREAS.

- * Starlink uses low Earth orbit (LEO) satellites to transmit data via radio signals.
- * Ground stations send signals to the satellites, which then relay the data back to Earth.
- * Starlink's LEO satellites orbit at an altitude of around 350 miles, which is much closer to Earth than traditional satellites.

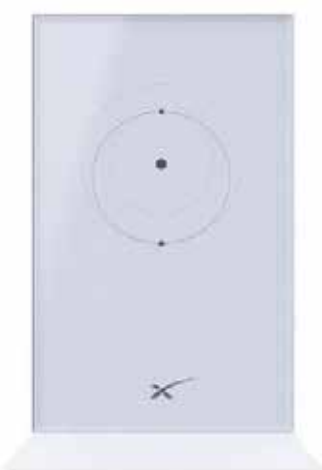

Features

- * Starlink is designed to be weather resistant and can withstand sleet, heavy rain, and harsh winds.
- * Starlink offers unlimited satellite internet for homes, RVs, campers, and boats.
- * Starlink offers a 30-day trial and a full refund if you're not satisfied.

Uses

- * Starlink is used to provide internet to rural and geographically isolated areas

“We offer sales and installation of starlink internet for business and personal use.”

Internet over Satellite

Satellite internet access service is an IP-over Satellite Service via two way satellite VSAT dish and Vsat terminal with high speed broadband internet connection. Satellite communication has the unique ability to deliver bandwidth exactly where and when it is needed, irrespective of geography and local infrastructure.

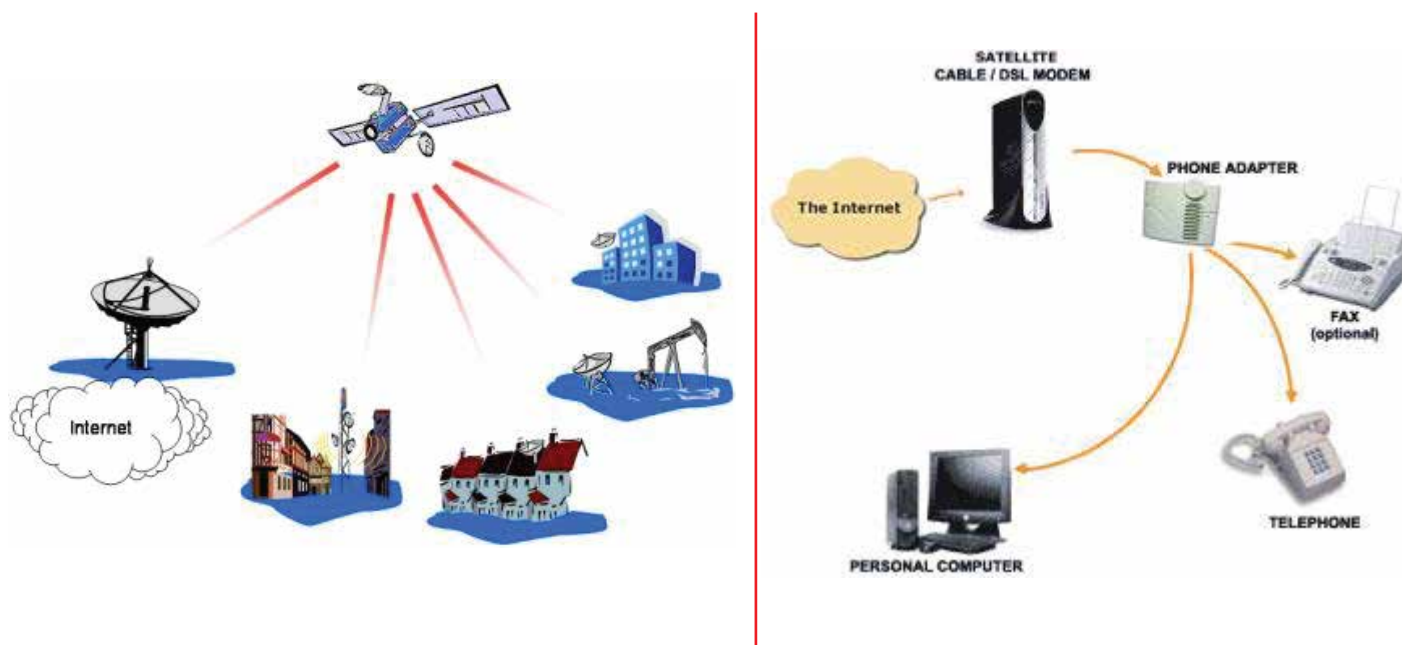

IP over satellite (Internet over Satellite, Broadband Satellite) is a high speed Internet connection via satellite to connect your two way Internet via Satellite broadband IP-Sat Terminal with the global Internet network (Internet over Satellite).

Internet via Satellite is the ideal solution for carriers/ IAPs/ ISPs to connect corporate Customers, Internet Cafes and Residential Users located in a remote area.

Voice over Satellite

Comtec's Voice over Internet Protocol (VoIP) telephony is a technology taking the world by storm. VoIP allows people to use their computer's Internet connection as a telephone, resulting in huge savings on both local and long distance calling. VoIP technology sends voice transmissions over the Internet as a data packet, which is organized and decoded by the VoIP software.

Most people who receive a VoIP call over their standard telephone line never even realize that they are connected with a VoIP user. VoIP over satellite works just like the telephone you have in your home today. You pick up the phone, dial the number and it connects to whom you're calling through your high-speed satellite internet connection.

Network Infrastructure

Comtec Media Network Infrastructure Solutions have built on and continue to leverage core network infrastructure services for our customers. Using proven design and implementation methodologies in conjunction with a broad experience of LAN and WAN infrastructure, Comtec Media provides best of breed network solutions.

Data networks have an increasing number of business critical systems to support so upgrading, optimizing or replacing them requires a partner with the appropriate technology specialization, solution vendors and understanding of the systems they support.

A key strength for Comtec Media is an ability to integrate network solutions based on our other business skill sets, for example a network to support server consolidation. Comtec Media considers the security, resilience, ease of management and value for money to be fundamental to any network infrastructure solution we are involved with. Examples include:

- # Chassis based and distributed switch block LAN infrastructure, including cabling and wireless services.
- # Site to Site and Remote Access VPN.
- # Security solutions.

VSAT Rentals

VSAT rentals are available for those projects where the site is remote or not serviced by Broadband on landline and the data throughput is expected to be high. These rentals can be as long as the customer requires. For shorter term projects where the site is in Inmarsat BGAN (Broadband Global Area Network) coverage, BGAN would be more cost effective.

VSAT systems need to be installed and aligned with the satellite. For those customers with own site technicians we can arrange training to enable a self installation. For other customers a site visit for Installation and commissioning will be necessary.

Computer Software and Hardware Solutions

When you need to purchase new software or upgrade your existing software Comtel Media will advise you on the packages that best meet your business requirements as well as provide the software. We will also, where necessary, assist you with loading the software and we even provide introductory instruction on new software applications if needed.

Expertise in;

- Windows 7,8 and 10, MAC OS, DOS
- Antivirus
- SendMail
- hMail
- Argosoft Mail Server
- Ftp Servers
- Web Servers
- DNS Servers
- Proxy Servers

Software Solutions

Software Systems, Development & Integration

Comtec Media has an extensive team of highly skilled software engineers and system administrators with proven expertise in software application development, system integration, and large scale database administration. Our team has solid technical skills in several areas, including:

- Extensive experience in N-tiered architectures for high availability and scalability
- Object oriented product development processes
- HTML, PHP, MySQL, and other programming languages
- Large scale database administration and data hosting services
- Email Server setup and integration which include (MS Exchange, Mdaemon, SendMail, hMail, Argosoft).

Hardware Maintenance & Repair

Comtec offers Computer maintenance, upgrade & repair services for laptops and desktop computers for small, medium and large businesses and home users. We provide call out service maintenance for desktops and Laptops repair.

CCTV. DSTV Installation and Subscription

At comtec we have a variety of computers and computer accessories, printers, photocopiers, scanners, projectors and digital and cctv cameras at reasonable prices. We also have Switches, Routers, Access Points, Patch Panels, softwares, all computer accessories and Cables for Networking. We deliver and do CCTV (closed-circuit television) installation and Maintenance for companies and individuals.

Comtec Media is also a DSTV dealer in South Sudan. We offer a Full kit DSTV supply and subscription on all Dstv packages to Individual subscribers, NGOs and companies.

Structured Cabling Systems

A structured cabling system provides a platform upon which an overall information system strategy is built. We design and build flexible cabling infrastructures nationwide - structured cabling systems that support multiple voice, data, video and multimedia systems regardless of their manufacturer.

We are a **"one stop shop"** for all your organization network infrastructure needs. We will help you evaluate, design and install the optimum integrated system for your company

Graphics. Web designing. Domain Registration & Hosting

We also introduce to you the Comtec Graphics Department, another exposition of high quality results, and competence as far as your graphic requirements are concerned.

We can develop a customized graphic design, and print. Some companies have benefited from our creativity and have appreciated the results with a lot of satisfaction.
